

## Trimble User Assignment and Device Management Policy

*Version 2.0 (Last Updated June 20, 2025)*

This Trimble User Assignment and Device Management Policy (this “**Policy**”) supplements the General Transaction Terms (the “**General Terms**”) and Supplement Terms for Software and Subscriptions (the “**Software Terms**”), in each case available at <https://www.trimble.com/en/legal/customer-terms> or any successor url. Capitalized terms not defined herein have the meanings given in the General Terms and the Software Terms.

### User Assignment

For Software offered on a Named User basis, Customer may reassign Named Users from one named person to another person through a self-service process in accordance with the General Terms, the Software Terms, and this Policy. Named Users may be reassigned from one person to another person only in the following scenarios:

- If a Named User is assigned to an employee of Customer or an Affiliate of Customer and that employee leaves the Customer’s or Affiliate’s employment or transfers to a different role for which access to the Software is not needed.
- If a Named User is assigned to an authorized third party user, such as a contractor or consultant, and that third party user’s engagement with Customer ends.
- If a Named User is mistakenly assigned to the wrong person at the time of purchase.
- At the time of renewal for the Subscription to the Software.

If Customer purchases a bundle consisting of multiple Software, the person assigned as a Named User for one Software component of that bundle consumes a Named User for all Software in that bundle.

### Device Management

A Named User may only use the Software simultaneously on up to the number of permitted devices identified in the Order or Documentation, if applicable, as described below:

- Three Devices - Allows up to three devices to be used simultaneously per TID
- One Device – Allows one device to be used simultaneously per TID
- Unlimited Devices – Allows unlimited device usage simultaneously per TID

Trimble Identification (TID) credentials are granted to individual, named persons and may not be shared to allow multiple persons to access Software from different devices.

### Violations

Trimble may monitor Customer’s compliance with this policy. If Trimble has a reasonable basis for determining that Customer is violating this policy, Trimble will notify Customer and Customer agrees to promptly remedy its noncompliance to Trimble’s reasonable satisfaction.
